

Abstract

My project is about "vaccinations". The usage of it and why it's important to humanity. It is very brief report talking and science of vaccinations due to limited resources. Some of the information that I used to do my research was the Ministry of Youth and Sport textbooks for grade 7. I want emphasize that science is very interesting topic that people can enjoy no matter what age we are. My project explains vaccines to very basic language that a lot of people are able to understand and comprehend. I mention in my report that Vaccines are spilt into four main groups such as live attentive vaccine, subunit vaccine, DNA vaccine and inactive vaccines. I talked about why it came from, how it works, how it is used. The present of vaccines and the future and the barriers to developing them.
